

INTRODUCTION

This project is about exploring the beauty of India which is made by using much known software called VSC i.e. Visual Studio Code.

- ▶ Tourism potential is immense in India. Our country is a country of diversity of climate, physical features, peoples, ethnicities, religions, languages, cultures, etc.
- ▶ Nearly every region in our vast and varied land has breathtaking natural beauty and enchanting flora and fauna. Tigers and Dolphins, Elephants and Pheasants, majestic Deodar and Orchids all are part of the enchantment of this land.
- ▶ So welcome to the site here you can explore the beauty of the India.
- ▶ Explore Bharat website provide you the most beautiful Cities, Wildlife sanctuary, Historical places and different cultures for exploring.
- ▶ This site provide you a better way for exploring India with information and visit you an unexploring places in India.
- ▶ This program also contain map by which tourist can easily find the places where they want to visit.

REQUIREMENT ANALYSIS

SCOPE

Exploring Bharat Project is an integrated software developed for exploring tourism places of India . The main aim of this project is to provide you the most beautiful Cities, Wildlife sanctuary, Historical places and different cultures for exploring. In future, complete tourism website could be made where user can explore different famous places and it's information.

OBJECTIVE

The Exploring Bharat project is web based application and maintains a centralized repository of all related information. The main objective of this project is to provide you the most beautiful Cities, Wildlife sanctuary, Historical places and different cultures for exploring with information, images, and also with the map location.

PROJECTIVE OUTCOME

There are some objective and outcomes has each project. So, my project has some outcome and objective. These objective given below briefly.

- This project provide you features for visit many tourism places in India.
- This project gives information about places with beautiful images.
- It also show tourism location on maps with discreption.
- This project maintain and control the database of tourism information.
- This project will provide display plateform in where a tourist can find his/her tourism places with map and also user can find his/her tourism location on map with discreption.

- This project also provide Tourism Feedback Form where user can fill a form if user want to share his past tourism place experience with descripton location and image.

ANALYSIS PHASE

REQUIREMENTS

The Exploring Bharat project is a web application. The main purpose of “Exploring Bharat Project” is to provide you the most beautiful Cities, Wildlife sanctuary, Historical places and different cultures for exploring with information, images, and also with the map location.

Requirements are:-

1. Operating System - **Windows.**
2. Runtime Environment - **Angular 8.**
3. Front End - **HTML, CSS, BOOTSTRAP 4, JAVASCRIPT, TYPESCRIPT.**
4. Back End - **NODE JS, AJAX, JQUERY, EXPRESS.JS.**
5. Data Base - **MONGO DB ATLAS.**
6. Editor - **VISUAL STUDIO CODE.**
7. Web Browser – **GOOGLE CHROME AND MICROSOFT EDGE.**

PROJECT DEVELOP LANGUAGES

There are three kind of languages have used in “Exploring Bharat Project”.

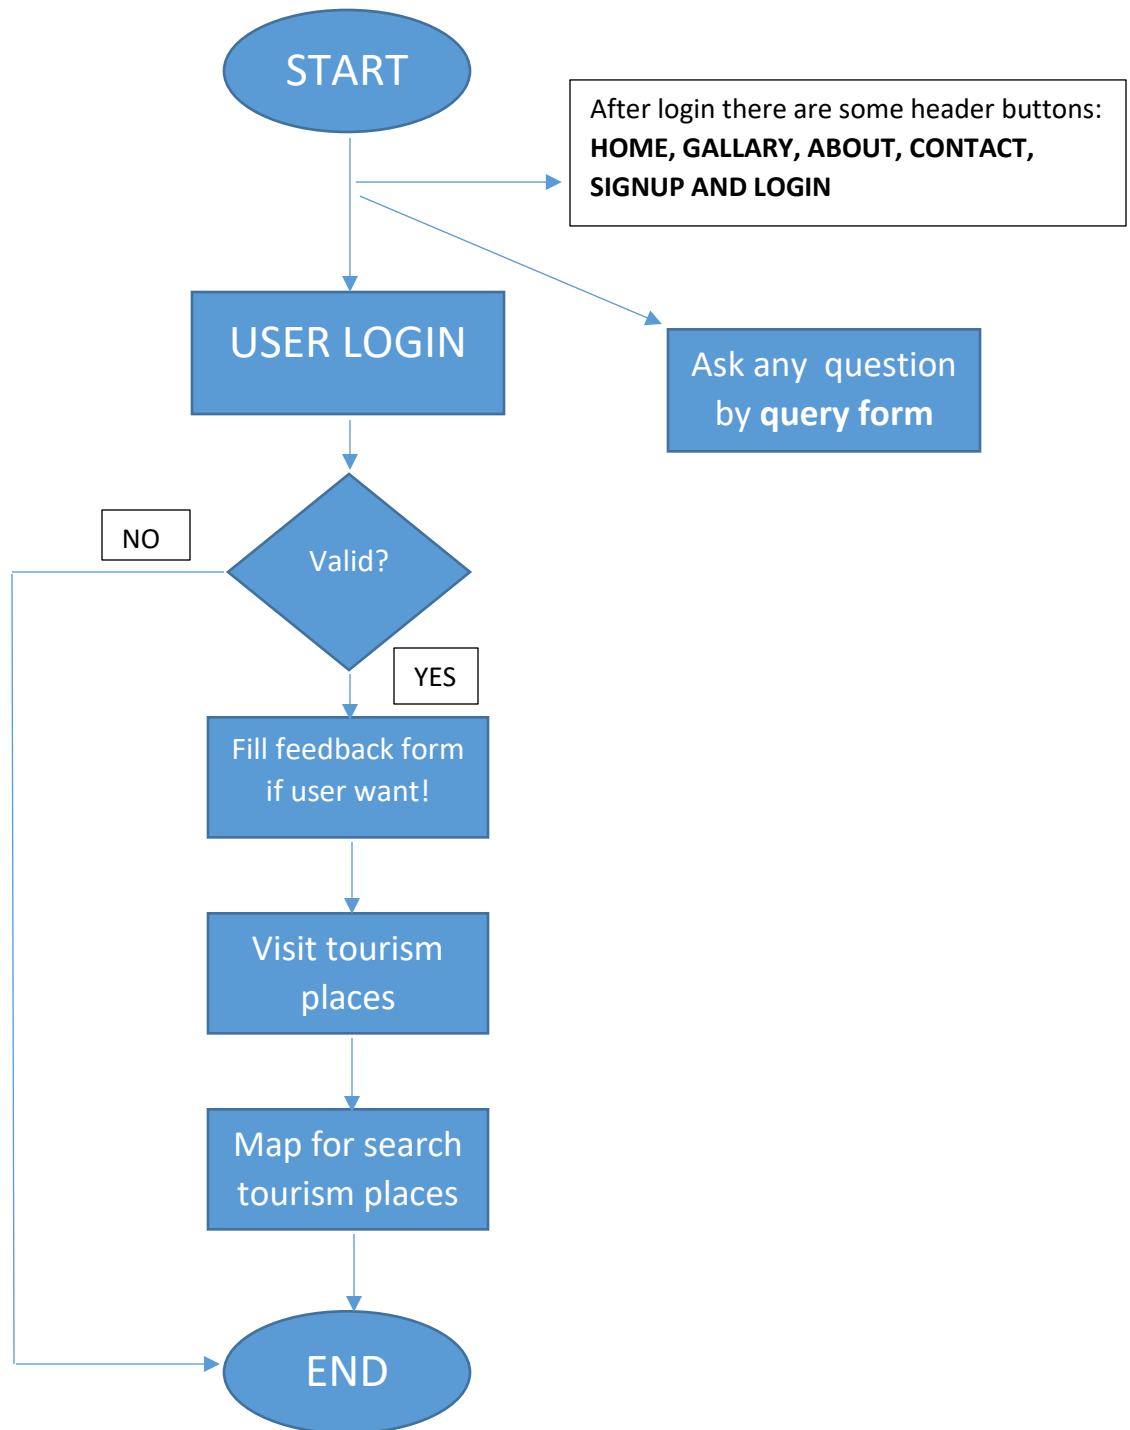

1. **Front End languages** include HTML, CSS, Javascript, Bootstrap-4 and frame work for front end – **ANGULAR 8.**
2. **Back End Languages** includes NODE JS, JQUERY, AJAX and frame work for back end **EXPRESS.JS.**
3. **Database language** include **MONGO DB.**

- **Thankyou Grras Solution for providing and teaching industrial training with efficient way.**
- **And also thankyou Arya College of Engineering & IT for introduce this training to us.**
- **We start our making project with our team members in the guidance of teacher Mr. Sanjay Rathore.**

lture, tasty cuisine, scenic beauty and
```

```

        heritage sites. We show you the most beautiful cities count
rywide with stunning
        urban landscapes, and a thriving cultural scene which you s
ould visit.</p>
    </div>
</div>
</div>
<div class="parentdiv">
    <div class="row">
        <div class="col cls " >
            <h2 style="margin-top: 30px; padding-
left: 180px;">Exploring wildlife</h2>
            <p style="padding: 40px;">
                Exploring wildlife has always been fun especially in places where
wild animals have
                become a part of culture and mythology. India has many sanctuarie
s and national parks
                that have been established the endangered species. With the effo
rts of government and public,
                many wildlife conservation areas are thriving and giving a chan
ce to people to the animals
                closely. In India, most of the forests are dense and are accom
panied by water bodies, hills,
                ravines, etc. Therefore, wildlife safari in any of the sanctua
ries in India is adventurous and memorising.

            </p>

        <div class="col cls">
            <h2 style="margin-top: 30px; padding-
left: 140px;">Explore Historical places</h2>
            <p style="padding: 40px;">It's hardly an exaggeration to say that Ind
ia's civilization is one of the oldest in
                the world. All throughout its history, it has witnessed the rise
and fall of several
                kings, dynasties and empires. Each of those in power, however,
left behind their

```

```

        legacy in the form of a monument, maybe a fort, palace or any
other historical
        structure. Apart from that, there are temples and caves which
bear testament to the
        artistic excellence attained in the past ages. These places of
historical importance
        aren't just significant as tourist destinations, they also attract l
overs of art and history.</p>
    </div>
</div>

Facing problem during development

I have face some problem during development of “**EXPLORING BHARAT**” web based application.

- **Requirement Gathering Phase** : it is very important step. If the requirement are not good, the project will fail. I was disappointed when I was collecting information and data then what information and data will be helpful or appropriate for this project.
- **During Desgin Phase** : in this time, I was confused for drawing flowchart because which flowchart will become better for this project.
- **Devlopment Phase** : It is critical part of the project. At this time, I have face lots of errors, bugs, but after solving all problems we complete this project.
- **Testing Phase** : It is necessary part of the project. This part will help to test the whole project. In this time , I have face some bugs in project.

CONCLUSION

Exploring Bharat Project is an integrated web software developed for exploring tourism places of India . this website proves to be strong system which has followed all the industrial standards. Normalization is applied on all the table sand are found to be in 3NF. The functional dependencies are also listed. Database is created with good design which is non SQL. **Future scope-** complete tourism website could be made where user can explore different famous places and it's information with location on map.

...**THANKYOU**...
